

VITOLD RADKEVICH

Senior SRE / Platform Engineer | AI-Driven Reliability & Distributed Systems

Warsaw, Poland | +48 571 091 688 | radkevichvit@gmail.com

LinkedIn: linkedin.com/in/vitold-radkevich

Portfolio: vitold-sys.github.io

EXECUTIVE SUMMARY

Senior SRE / Platform Engineer with 7+ years of experience building and operating distributed systems and cloud platforms (AWS/Azure/GCP).

Specialized in reliability engineering, internal developer platforms, and incident management.

Proven track record of improving system stability, reducing MTTR, and building production-grade tooling used by engineering teams at scale.

Strong focus on AI-driven SRE (AIOps) – designing LLM-based systems to automate incident analysis, reduce alert fatigue, and support engineers during on-call operations.

Experienced Incident Commander in high-scale production environments.

TECHNICAL SKILLS

Infrastructure & Cloud:

- Kubernetes (EKS, GKE), AWS, Azure, GCP, Docker, CI/CD (GitHub Actions, Jenkins)

Reliability & SRE:

- SLO/SLI Design, Incident Management, Chaos Engineering (Chaos Mesh), Observability (Prometheus, Grafana, ELK)

Backend & Distributed Systems:

- Kotlin, Java, Spring Boot, Microservices, Kafka, RabbitMQ, gRPC, PostgreSQL, MongoDB

AI & Automation:

- LLM Integration (Vertex AI), AI-driven SRE Agents, LangChain
-

PROFESSIONAL EXPERIENCE

Allegro

Site Reliability Engineer / Software Engineer | Oct 2024 – Present

- **Incident Commander:** Lead the resolution of critical production outages, coordinating cross-functional response teams in high-scale environments.
- **Reliability Tooling Ownership:** Co-technical owner of critical **Incident Notification and On-call Scheduling systems**, driving shared ownership processes and reducing the bus-factor.
- **Infrastructure Stabilization:** Led the migration and stabilization of resilience testing workflows during a major **Internal Developer Platform (IDP)** transition, ensuring deterministic behavior of complex chaos experiments.
- **Platform Engineering:** Contribute to large-scale initiatives for system observability and automation, focusing on reducing MTTR and operational risks.
- **Resilience & Disaster Recovery Engineering:** Designed and executed controlled failure scenarios, including full data center shutdown simulations and recovery validation tests, to ensure system resilience under catastrophic failure conditions.
- **Led monitoring and coordination during large-scale failure simulations**, validating system behavior under service degradation and full infrastructure outages.

EffectiveSoft

Java Software Developer | Apr 2022 – Oct 2024

- **Cloud Infrastructure Design:** Designed and deployed cloud infrastructure for multiple production systems on AWS, including multi-region setups for high availability and fault tolerance.
- **Environment Ownership:** Owned production environments, including monitoring, incident response, and system stability – participating in on-call rotations and handling real production incidents.
- **Scalable Backend Systems:** Built and maintained scalable backend systems, translating complex business logic (including risk assessment models) into reliable and performant services.
- **Risk Assessment Modeling:** Developed a business risk assessment system based on mathematical models, implementing domain-specific logic and processing large datasets.

- **CI/CD Automation:** Improved system reliability and deployment processes by introducing automation and CI/CD practices.

VironIT

Java Web Developer | Nov 2019 – Feb 2022

- **API Development:** Developed backend systems and APIs for international projects, focusing on scalability and maintainability.
- **Cloud Stability Support:** Contributed to cloud-based deployments and production environments, supporting system stability and performance.
- **Cross-Functional Collaboration:** Worked with distributed teams to deliver production-ready features under tight deadlines.

JSC Bank

Software Engineer | Oct 2018 – Jun 2019

- **Banking Systems Development:** Developed internal banking systems and backend services.
 - **Security & Performance:** Focused on reliability, security, and system performance.
-

SELECTED HIGH-IMPACT PROJECTS

(Full portfolio of 13+ projects available at: vitold-sys.github.io)

AI-Driven SRE Agent & Incident Analysis Platform

Lead Platform Engineer

Tech: Kotlin, LLM, Vertex AI, GCP, Prometheus

Designed and implemented an AI-powered SRE agent that aggregates logs, metrics, and incident data to provide real-time incident analysis.

- Correlates signals across distributed systems
- Identifies probable root causes
- Suggests responsible engineers (on-call)
- Reduces noise and highlights critical issues

Impact:

- Reduced incident diagnostic time
- Reduced alert fatigue and improved incident triage efficiency

- Improved on-call efficiency and decision-making

Chaos Engineering & Resilience Platform

Senior SRE Engineer

Tech: Kotlin, Chaos Mesh, Kubernetes, Hexagonal Architecture

Developed a platform for controlled failure injection in production and staging environments.

Impact:

- Identified 10+ critical architectural weaknesses
- Implemented automated failover validation
- Improved system resilience under real-world conditions

High-Scale Load Testing Platform (Gatling-based)

Backend & SRE Engineer

Tech: Kotlin, Spring Boot, Gatling, GCP, Grafana, Testing Tools (ADHOC, SharedGE)

Scaled internal load testing platform capable of simulating millions of users.

Impact:

- Validated critical systems (e.g. checkout flows)
- Ensured 99.99% availability during peak traffic (Black Friday)
- Delivered mobile-ready simulation logic, allowing the business to validate resilience against realistic mobile vs. desktop traffic distributions.

Centralized Status Page & Reliability Hub

Platform Engineer

Tech: Java, Spring Boot, Prometheus, React

Built a unified system for real-time service health visibility and reliability reporting.

Impact:

- Enabled real-time system health tracking
- Introduced GMV-based incident impact calculation
- Improved executive-level decision making

Cloud-Based Risk Assessment Platform

Lead Backend / DevOps Engineer

Tech: Java, AWS, Spring Boot, MailJet, Stripe, Google API

Designed and deployed cloud infrastructure for a business risk analysis platform.

Impact:

- Built scalable architecture handling 140k+ records
 - Implemented full CI/CD and production deployment pipeline
 - Ensured high performance and security for US market
-

CERTIFICATIONS & EDUCATION

Certifications:

- AWS Certified Cloud Practitioner
- Microsoft Certified: Career Essentials in Generative AI
- AI Devs Certification (LLM & AI Engineering)

Education:

- Bachelor's Degree in Management Information Resources
 - Belarusian State University
-
